**H. CASE NARRATIVE**

The sample was provided to the laboratory by a RMD agent. Sample was submitted in a sealed container under ambient conditions. Chain of Custody seal was intact. All recorded contaminants are within the established limits.

**Test Summary:**

**Cannabinoid Analysis:** The sample was analyzed for cannabinoids by Liquid Chromatography (WI-10-17). Prior to analysis, sample was prepared by extraction with an organic solvent with the addition of a QuEChERS clean-up. Sample was filtered and diluted with an appropriate HPLC diluent. The recorded data was compared to data collected for certified reference standards for quantification.

**Microbiological Screening:** This sample was analyzed for microbiological contaminants using culture-based plating methodology consistent with USP <61>. This test method was performed in accordance with the requirements of ISO/IEC 17025.

**Pathogenic Bacteria:** This sample was analyzed for pathogenic bacteria using a culture-based plating methodology with an enrichment step consistent with USP <62>. Quality control checks are performed monthly by running both a positive and a negative control sample for each pathogen.

**Mycotoxin Testing:** The sample was analyzed for mycotoxins using Liquid Chromatography (WI-10-40). Prior to analysis, sample was extracted with organic solvent, followed by the ImmunoAffinity column clean-up.

**QC Summary:**

**Cannabinoid QC:** A method blank was prepared in parallel with the study sample, using only associated reagents, with no matrix included. In addition, quantitation was evaluated with a Continuing Calibration Verification (CCV) sample.

**Microbiological QC:** A method blank was prepared in parallel with the study sample, using only associated reagents, with no matrix included. In addition, an environmental blank was collected using a 3M PetriFilm, that was exposed to work area during sample preparation, followed by incubation to confirm the absence of environmental contaminants.

**Pathogenic Bacteria QC:** For each pathogen, a positive and negative control sample is run on a monthly basis.

**Mycotoxin QC:** A method blank was prepared in parallel with the study sample, using only associated reagents, with no matrix included. In addition, quantitation was evaluated with a Continuing Calibration Verification (CCV) sample.

Total CBD		ND	ND	sample as received.		
Total Cannabinoid (TAC)		3.17 wt%	31.7			
<b>CBD to THC Ratio</b>		<b>0 : 1</b>				

There are no limits established by the Massachusetts Cannabis Control Commission for cannabinoid concentrations. Total THC and CBD values are based on the assumption that acidic cannabinoids have been decarboxylated, such that Total THC = (0.877 x THCA) + D9-THC and Total CBD = (0.877 x CBDA) + CBD. ND = None Detected above the Limits of Detection (LOD).
